Paper 0606/01

Paper 1

## General comments

Attempts were of variable quality with some very good efforts but also some very poor ones. Some candidates appeared to lack the knowledge required in certain questions, others had the knowledge, even knew the processes, but were unsure of the application. Although most candidates seemed to have time to do all they could, there were those who ran short of time, often because of time spent on over-long efforts (especially in **Question 6** and in using binomial expansion in **Question 1**). Some candidates misquoted formulae (especially differentiation of quotients and products) and others produced answers without showing full working. In the latter case an incorrect answer cannot gain any available method marks. Standards of presentation remain variable.

## Comments on specific questions

### **Question 1**

Some candidates found this to be a hard opening question which involved having to realise that differentiation was needed and then having to cope with both composite function and product rule. The majority, however, coped well with the question, often losing the final mark only through algebraic and numerical slips rather than any error in differentiation. Some efforts using binomial expansion etc. were seen but very few were successful.

Answer: 17.

### **Question 2**

Finding points *A* and *B* by removal of one variable and solution of the subsequent quadratic equation was done well by most candidates (although some found only *x* values or *y* values). From there on some found the equation of *AB* and stopped. Others found the gradient of the perpendicular but then found the equation of a line with this gradient but through either *A* or *B* instead of the mid-point of *AB*. A significant number of candidates thought the mid-point was found as half the difference of the *x* values (ditto the *y* values) rather than half the sum.

Answer:  $4y = x + 41$ .

### **Question 3**

A large number of candidates made no attempt at all, or merely attempted to draw a triangle. Some candidates attempted to use the figures as given with no regard for the differing units. Fortunately most realised that they needed to work with consistent units – usually speeds, but some used distances and then brought in the 2 hours. Done correctly, with  $45^\circ$  the included angle between 150 and 500 (or 300 and 1000) in their triangle of velocities (displacements), cosine rule and then sine rule gave the required answers. Many candidates had 'the wrong triangle' with  $135^\circ$  as the included angle (by far the most common error), or had a triangle with  $45^\circ$  as the non-included angle and then used sine rule twice. Some candidates also found the required speed as the sum, or difference, of the two known speeds and still drew a triangle and attempted to use cosine or sine rule; others made the assumption of a right-angled triangle.

Some candidates who worked the question correctly spoil their efforts by giving the angle required in part (ii) to the nearest whole number, rather than the 1 decimal place specified in the general rubric for angles in degrees.
