ADEMCO 4209U Universal Group Zoning Multiplex Module

INSTALLATION AND SETUP GUIDE

FEATURES

The ADEMCO 4209U Group Zoning Multiplex Module is a 4-zone expander that allows use of available expansion zones provided by ADEMCO controls that support V-Plex[®] devices. Its primary purpose is to provide additional 2-wire smoke detector loops to the control. Characteristics of this device include:

- Uniquely identifies 4 supervised zones or 2 supervised zones in the "grouped" mode (groups two supervised zones together into one zone).
- Supports up to 16 2-wire smoke detectors on each of its 4 loops, regardless of group setting.
- DIP Switches can be used to set zone numbers or serial numbers.
- When used in the serial number mode, each serial number in the selected group can be assigned to any zone number.
- Tamper protected.

Figure 1. Tamper Magnet Installation

UL

1. Do not mix different detector models on one system.
2. Do not assign zone type 16 (Fire with Verification) to 4209U zones.
3. Close contact type initiating devices or two wire smokes.
4. All zones are Class B, Style B.
5. Loop: 12V, 7.7mA (normal) 25mA (shorted).
6. UL Compatibility ID: A

MOUNTING

1. Power should be disconnected before proceeding.
2. Be sure to mount the 4209U before making any wire connections.

The module must be mounted inside the control's cabinet or a separate enclosure. Tamper does not have to be enabled if the cabinet is supervised.

Insert self-tapping screws (provided) in two adjacent raised tabs at the back of the cabinet, leaving the heads projecting 1/8". Hang the module on the screw heads via the two slotted holes on the back of the module's housing. If tamper protection is desired, set DIP Switch 8 to OFF and attach the tamper magnet (provided) to the module inside cover (see Figure 1). Be sure to enable the expansion zone tamper option at the control (program field *24 = 0).

When the module's cover tamper is enabled, upon removal of the cover, the magnet attached to the cover (positioned near the red switch) will cause a tamper signal to be sent to the control for every active zone on the 4209U module.

When the installation is complete, install the cover and affix the Serial Number and Zone Assignment Tables to the inside cover of the control.

WIRING

CE

For CE installations, ADEMCO N8361 EMI suppression bead is required. Refer to the N8361 installation guide for wire routing instructions.

Polling loop and protection loop wires can be brought in either through the back or front of the unit by removing the knockouts. Use 22 gauge twisted pair wire for polling loop connections. All protection loops use 2k EOL resistors (included). A maximum resistance of 100 ohms is allowed on protection loops (including EOLR). See Figure 2 for all connections. Keep in mind that even in the grouped mode, each set of terminals must have its own 2k EOLR, and it must be connected across the loop wires at the last detector.

UL

1. All circuits are supervised and power limited.
2. Use only 14-22 AWG wire.
3. Refer to the control panel installation instructions for specific programming and installation requirements.

Power Connections must be made so that power to the smoke detectors can be momentarily interrupted to clear the alarm. This can be done via the control's auxiliary relay or a 4204 relay.

Wire the common of the relay to 12VDC and the N.C. contact on the 4209U (TR2, terminal 3). The relay you use must be programmed for "Smoke Detector Reset" (see control panel's instructions). When you reset an alarm at the keypad, the relay arm will swing momentarily to the N.O. contact, causing an interruption of power.

DIP SWITCH SETTINGS ZONE ASSIGNMENT MODE:

In the zone assignment mode, the DIP Switches on the 4209U are used to assign the unit to a group of four consecutive zones in the "non-grouped" mode, or two consecutive zones in the "grouped" mode. These zone numbers, once designated for the 4209U, cannot be used for anything else, even if you don't use them all. Follow the steps below using Table 1 for DIP Switch settings.

SERIAL NUMBER MODE:

In the serial number mode, the DIP Switches on the 4209U are used to assign the unit to a group of 4 serial numbers, or 2 serial numbers in the "grouped" mode. You can assign any serial number to any zone number (except hardware zone numbers on the control) and you do not lose zone numbers if you don't use all 4 loops on the 4209U. Follow the steps below using Table 2 for DIP Switch settings.
