WIRING AND INSTALLATION

The keypads can be surface mounted directly to a drywall, or to a single- or double-gang electrical box.

1. Push the two case release snaps at the bottom of the keypad with the blade of a medium screwdriver (this will push in the release snap), then pull that side of the case back away. Insert the screwdriver in the side of the keypad (between the front and back case) and gently twist to release the side locking tab. Repeat for the other side. Refer to Figure 1 for location of the case back release snaps and locking tabs.
2. Route wiring from the control panel through the opening in the case back.
3. Mount the case back to a wall or electrical box.
4. Wire directly from the keypad's terminal block to the terminal block on the control panel. (See Wiring Table below).

NOTE: No more than one wire per terminal may be connected. If daisy-chained configuration is required, pig-tail wires together so that only one wire is terminated under the screw. Use 14-22 AWG wire only!
