Sequential Analysis Hypothesis Testing and Changepoint Detection systematically develops the theory of sequential hypothesis testing and quickest changepoint detection. It also describes important applications in which theoretical results can be used efficiently. The book reviews recent accomplishments in hypothesis testing and changepoint detection both in decision theoretic Bayesian and non decision theoretic non Bayesian contexts. The authors not only emphasize traditional binary hypotheses but also substantially more difficult multiple decision problems. They address scenarios with simple hypotheses and more realistic cases of two and finitely many composite hypotheses. The book primarily focuses on practical discrete time models with certain continuous time models also examined when general results can be obtained very similarly in both cases. It treats both conventional i.i.d. and general non i.i.d. stochastic models in detail including Markov hidden Markov state space regression and autoregression models. Rigorous proofs are given for the most important results. Written by leading authorities in the field, this book covers the theoretical developments and applications of sequential hypothesis testing and sequential quickest changepoint detection in a wide range of engineering and environmental domains. It explains how the theoretical aspects influence the hypothesis testing and changepoint detection problems as well as the design of algorithms.

Morgantina Studies, Volume II Theodore V. Buttrey, Kenan T. Erim, Thomas D. Groves, R. Ross Holloway, 2019-08-06. This volume continues documenting the well known excavations at Morgantina, a Greek town in central Sicily, in a presentation of the largest body of coins ever unearthed at an Italian site and published as a group. The excavations conducted by Princeton University, The University of Illinois, and The University of Virginia between 1955 and 1981 produced nearly 10,000 identifiable coins, most of them of Sicilian Greek and Roman issues struck before the end of the first century B.C. The numismatic evidence not only made possible the initial identification of the site as Morgantina but has subsequently opened the way to reconstructing the history of early Roman Republican coinage and the bronze coinage of Greek Sicily. The catalogue presents a full list of the coins found at Morgantina through the 1981 season with discussion of significant issues and illustrations of 679 specimens. A completed corpus and study of the coins struck at Morgantina is also included. Theodore V. Buttrey is Professor Emeritus of Classical Studies at the University of Michigan. Kenan T. Erim is Professor of Classical Archaeology at New York University. Thomas D. Groves is a graduate student in the Department of Classical Archaeology at Princeton University. R. Ross Holloway is Professor of Classical Archaeology at Brown University. Originally published in 1990.
