

## Intruder Alarm Control System - Operating Instructions

The Accentia range of intruder alarm control equipment is designed to be used in a wide variety of applications including systems that are monitored by an Alarm Receiving Centre.

Accentia is controlled by a Central Processing Unit (CPU) which may have been connected within the premises. To avoid the risk of electric shock the CPU cover should NOT be removed. Refer sending to qualified service personnel.

### PROGRAMS

Up to 3 Programs may be preset within Accentia to allow particular monitoring modes of your property and at different times. For example, Full Set, Evening Set and Night Set.

Each program will use one of the four modes described below.

**Reset** - A third program will fail at the end of a pre-determined set time period.

**Full Set** - A first class program is normally used when you are leaving the premises and will fail 1 second after the fault has been cleared.

**Immediate** - An immediate program is normally used when you are not leaving the premises and will fail immediately as the program has been selected.

The 'Engineer Details' section of these instructions contains details showing the correct set mode for the alarm Program.

Finally, the information below on testing the system, assumes that all Programs are a 'Reset or Full Set' faulting mode.

### TO SET THE SYSTEM ON PROGRAM 1

The green Day Indicator should be showing. Enter your code number and check that the system is clear (none of the four indicators are showing). The speaker will now produce a tone

every time and you should move to the appropriate mode. The system will fail at the tone stops.

### Push to Set Switch

In some systems a Push to Set switch may be fitted outside the premises near to the main exit door. This should be used to complete the setting procedure once the faulting has been initiated. As the switch is operated, the set tone will stop and a chime tone will be produced to acknowledge setting.

### TO SET A PROGRAM

The green Day Indicator should be showing. Enter your code number and the set tone will stop. Press the Program and the set tone will stop. Press 1, 2 or 3 for the required Program. The monitor will keep the Program number. The set tone will continue and you should move to the appropriate mode. The system will fail at the tone stops.

**It is important that you follow the correct procedure when setting the system in any of the programs. After leaving the protected area it is absolutely essential that you wait until the set tone stops, before ensuring that the system has set.**

### FALSE ALARM ACTION

If the system is not clear when you try to set it, the monitor will produce a broken beep tone and the fault will be displayed. Other events your code to turn off and investigate or send the faulty alarm to turn the system.

### TO CANCEL A ZONE

During the set period (after entering your code and selecting a Program) press **Cancel**, the set tone will stop and the zone that was about to be armed will be displayed. Yes in the zone number to be armed which will flash to indicate selection. Some indicators which show ready are all listed to be armed. When the selection is complete press **Set** and the set tone will continue.

If the zone is about to be armed, Press **Set** because the engineer has programmed the correct system to prevent you from turning off the zone. It is essential for safety.

### QUICK SET

During the set period (after entering your code and selecting a Program) the system may be set quickly by pressing **Set**. This removes the time period usually allowed for set and would be used if you are not leaving the premises.

If you are using the engine Quick Set, you will receive a press **Set** tone.

### TO UNSET THE SYSTEM

Enter your code. If the system has not been previously selected, the green Day Indicator will come on. If the system has been selected, then entering the code within the door off and the removal of the alarm will be displayed.

Press **Reset** to clear the indication.

### DISARMED RESET

It is usually a false requirement that monitored alarm systems are tamper proof. This means that if the alarm is triggered, the tamper switch will cut out and the alarm cannot be used. An engineer has to be called out to rewire the cause of the alarm and reset the system.

### ARM-CODE REMOTE RESET

In addition to engineer reset, your system may offer an code reset. This means that after an alarm condition the remote support will lock depending on the event the alarm.

If the **Reset** key is pressed a 4 digit remote code will be displayed by the **Zone** Indicator. For example **Zone Indicator 1** flashing or followed by **Zone 2, 3** and 4 flashing on. This will be a code code of 1234.

Contact the engineer or Alarm Receiving Centre explaining the cause of the alarm. If an engineer call out is not required you will be

given a 4 digit code which will reset the system.

### CANCELING POWER ACTION

Most police forces will require the Alarm Receiving Centre to determine if an alarm call is genuine before they respond to it.

This is usually done automatically by the alarm receiving centre monitoring alarm signals from your system, including the time period between the alarm being triggered and switched off.

It is important that you understand how your system may categorise alarm and any critical time periods that exist. Check these details with your engineer.

### ARM ZONE

Zone 1 may be armed in the zone. If the alarm is triggered, the tamper switch will flash or indicator immediately and internal system will produce a false fire tone. The external siren may also pulse on and off.

The alarm will be faulted off and reset in the same way as intruder alarm situations.

### CHIME

Chime is a low security application to use when the system is clear. When a zone that is set to chime is operated, the internal siren will produce a low volume two stage warning tone and the **Zone** Indicator will show. If no sound the **Zone** Indicator may be canceled by pressing **Reset**.

Details of how to set zones on chime is given in the Customer Programming section.

### REMOTE REVERSECH

Your system may have been fitted with a remote keypad. This can be used as an alternative to setting the system with a code (you will set Program 1).

When a key switch is used it may be necessary on occasions to allow it to 'switch up' with the system. For example if the alarm was set with a code, to clear with the remote, it would have to be momentarily turned to set then returned to clear.

### FLASHING TAMPER INDICATOR

The **Tamper** Indicator on the remote keypad shows when there is a tamper fault. It will also flash in the following conditions:

**Tamper Warning** - If the **Tamper** Indicator is flashing at the rate of approximately 1 second on and 2 seconds off, your system may require servicing.

The alarm prevent the system from being set and clear but you should call the engineer for advice.

**Telephone Line Fault** - If the **Tamper** Indicator flashes at the rate of approximately 1/2 second on and 1/2 second off, a telephone line fault has occurred. Press **Reset**. If the **Tamper** Indicator goes off, the telephone line fault has cleared.

A telephone line fault will not prevent the system from being set and clear but all telephone line faults should be reported to the engineer immediately.

### POWER INDICATOR

The red **Power** Indicator should be showing at all times on the remote keypad. If the indicator goes off, consult the engineer.

### SERVICE/MAINTENANCE

It is important that you fully understand the operation of your alarm system and that it is regularly serviced and tested by the engineer.
