

CHAPTER 10: CONTROL AND ACCOUNTING INFORMATION SYSTEM

There are a few reasons why trends to accounting information systems are increasing. The first reason is that information available is to an unprecedented number of workers. Besides, information on distributed computer networks is hard to control. Information is often distributed among many systems and thousands of employees. Customers and suppliers have access to each other's systems and data.

Any potential adverse occurrence is called a threat or an event. The potentially dollar loss from a threat is called the exposure or impact. The probability that it will happen is called the likelihood of the threat.

Internal control is the process implemented to provide reasonable assurance that the following control objectives are achieved. It is a process because it permeates an organization's activities and is an integral part of management activities. Internal control provides reasonable assurances. Complete assurance is difficult to achieve and prohibitively expensive.

Internal control perform three important functions:

1. **Preventive controls** deter problems before they arise.
2. **Detective controls** discover problems that are not prevented.
3. **Corrective controls** identify and correct problems as well as correct and recover from the resulting errors.

Internal controls are often segregated into two categories

1. **General controls**. This type of control makes sure an organization's control environment is stable and well managed.
2. **Application controls**. This type of control makes sure transactions are processed correctly.

A Harvard business professor has espoused four levels of control to help management reconcile the conflict between creativity and controls.

- **Belief system**. This system describes how the company creates value and helps the employees understand the management's vision.
- **Boundary system**. This system helps employees act ethically by setting boundaries on employee behavior.
- **Diagnostic control system**. This type of system measures, monitors, and compares actual company progress to budgets and performance goals.
