Time And Science - Volume 2: Life Sciences Remy

Lestienne,Paul Harris,2023-06-22 Life and Time are very closely linked because life needs the patience of eons to emerge and evolve and also due to the precision timing of neural networks in the perception of the world encoding information and performing actions A dozen renowned biologists and neuroscientists collaborate in this volume to explore the various facets of timing in the living world The temporal programming of the activity of the genetic code controls the essential mechanisms of individual development from zygote to adult while evolution uses the succession of generations to accomplish its work For its part the brain accomplishes the miracle of justifying presentism and reconstructing the continuity of present time from the fragmented data accessible to the senses as well as measuring durations and dating events To this end the brain uses a multilevel temporal coding to transport and decode sensory information and prepare motor responses It is only gradually that we have discovered the temporal precision of the mechanisms involved of the order of a few milliseconds or less for the adjustment of neural networks or the synaptic plasticity used for memory formation Today the perfection of natural neural networks the energy saving use of spikes of electrical impulses to categorize the sensory environment and to guess its probable future is an example to the modelers and engineers of artificial intelligence

Trends in the Early Careers of Life Scientists

National Research Council,Division on Earth and Life Studies,Commission on Life Sciences,Committee on Dimensions, Causes, and Implications of Recent Trends in Careers of Life Scientists,1998-10-03 In each year between 1994 and 1996 more than 7 000 individuals received a Ph D in life science and the number of graduates is rising sharply If present trends continue about half of those graduates will have found permanent positions as independent researchers within ten years after graduation These statistics and the labor market situation they reflect can be viewed either positively or negatively depending on whether one is a young scientist seeking a career or an established investigator whose productivity depends on

the labor provided by an abundant number of graduate students This book examines the data concerning the production of doctorates in life science and the changes in the kinds of positions graduates have obtained It discusses the impact of those changes and suggests ways to deal with the challenges of supply versus demand for life science Ph D graduates Trends in the Early Careers of Life Scientists will serve as an information resource for young scientists deciding on career paths and as a basis for discussion by educators and policymakers as they examine the current system of education linked to research and decide if changes in that system are needed

Renegotiating Disciplinary Fields in the Life Sciences Alessandro Minelli,2021-02-24 Recent and ongoing debates in biology and the philosophy of biology reveal a widespread dissatisfaction with traditional explanatory frameworks There are also problems with the current definitions or circumscriptions of key concepts such as gene species and homology and even of whole disciplinary fields within the life sciences e g developmental biology These contrasting views are arguably a symptom of the need to revisit traditional unchallenged partitions between the specialist disciplines within the life sciences

In the diversity of topics addressed and approaches to move beyond the current disciplinary organization the five essays in this volume will hopefully stimulate further exploration towards an improved articulation of life sciences **Astronautics**
