Geophysical Data Analysis: Understanding Inverse Problem Theory and Practice Max A. Meju, 1994
Geophysical data analysis is a very practical subject and this book is intended to be a simple guide to the techniques of parameter estimation and error analysis I have placed emphasis on the reconciliation of theory and practical data to enable the reader understand how to tackle typical problems in data analysis It is hoped that a mastery of the simple techniques described in this book will inspire confidence in the reader to consult the more classical treatment of the subject It is pertinent to mention that this book developed out of a highly successful course of the same title given to senior undergraduate geophysics students in Leicester University since 1988 and its popularity stems from the structured learning programs and the simple effective practical approach to geophysical inversion The course is given in the first semester to provide students with the basic tools for quantitative analysis of geoscientific data and consists of 10 lectures and practical sessions involving the materials given in Chapters 1 to 9 in this book Chapter 10 derives from topical issues of research interest to me and my induction courses for postgraduate students in geophysics and the industry The contents of this book are easily digestible and require little statistical or mathematical commitment

Quadratic Number Theory J. L. Lehman, 2019-02-13 Quadratic Number Theory is an introduction to algebraic number theory for readers with a moderate knowledge of elementary number theory and some familiarity with the terminology of abstract algebra By restricting attention to questions about squares the author achieves the dual goals of making the presentation accessible to undergraduates and reflecting the historical roots of the subject The representation of integers by quadratic forms is emphasized throughout the text Lehman introduces an innovative notation for ideals of a quadratic domain that greatly facilitates computation and he uses this to particular effect The text has an unusual focus on actual computation This focus and this notation serve the author's historical purpose as well ideals can be seen as number like objects as Kummer and Dedekind conceived of them The notation can be adapted to quadratic forms and provides insight into the connection between quadratic forms and ideals The computation of class groups and continued fraction representations are featured the author's notation makes these computations particularly illuminating Quadratic Number Theory with its exceptionally clear prose hundreds of exercises and historical motivation would make an excellent textbook for a second undergraduate course in number theory The clarity of the exposition would also make it a terrific choice for independent reading It will be exceptionally useful as a fruitful launching pad for undergraduate research projects in algebraic number theory

Casual Calculus: A Friendly Student Companion (In 3 Volumes) Kenneth Luther, 2022-08-16 Yes this is another Calculus book However I think it fits in a niche between the two predominant types of such texts It could be used as a textbook albeit a streamlined one it contains exposition on each topic with an introduction rationale train of thought and solved examples with accompanying suggested exercises It could be used as a solution guide because it contains full written solutions to each of the hundreds of exercises posed inside But its best position is right in between these two extremes It is best used as a companion to a traditional text or as a refresher with its conversational tone its get right to it content structure and its inclusion of complete solutions to many problems it is a friendly partner for students who are learning Calculus either in class or via self study Exercises are structured in three sets to force multiple encounters with each topic Solved examples in the text are accompanied by You Try It problems which are similar to the solved examples the students use these to see if they're ready to move forward Then at the end of the section there are Practice Problems more problems similar to the You Try It problems but given all at once Finally each section has Challenge Problems these lean to being equally or a bit more difficult than the others and they allow students to check on what they've mastered My goal is to keep the students engaged with the text and so the writing style is very informal with attempts at humor along the way Because we have large engineering and meteorology programs at my institution and they make up the largest portion of our Calculus students naturally then these sorts of STEM students are the target audience

Principles and Practice of Constraint Programming - CP 2010 David Cohen, 2010-09-07 The 16th annual International Conference on the Principles and Practice of Constraint Programming CP 2010 was held in St Andrews Scotland during September 6-10 2010 We would like to thank our sponsors for their generous support of this event This conference is concerned with all aspects of computing with constraints including theory algorithms applications environments languages models and systems We received a wide variety of submissions each of which was reviewed by at least three referees Referees were chosen for each submission by an initial bidding process where Program Committee members chose papers from their area of interest The range of expertise represented by the large Program Committee meant that almost all submissions were reviewed by subject experts on the Program Committee or by colleagues chosen by members of the Program Committee for their particular expertise Papers were solicited either as long 15 page or short 8 page submissions Short paper submissions were refereed to exactly the same high standards as long paper submissions but naturally were expected to contain a smaller quantity of new material Thus there is no distinction in these proceedings between short and long papers I used the excellent EasyChair conference management system to support this process of reviewing and for the collation and organization of these proceedings Submissions were made either to the applications track or to the research track There were 101 23 short research track submissions of which 36 8 short were accepted which is a 36% 35% of short acceptance rate Application track submissions received special consideration and the acceptance rate was significantly higher than for the research track
