

## 1.3 Studying Life

### Lesson Objectives

-  List the characteristics of living things.
-  Identify the central themes of biology.
-  Explain how life can be studied at different levels.
-  Discuss the importance of a universal system of measurement.

### Lesson Summary

**Characteristics of Living Things** **Biology** is the study of life. Living things share these characteristics: They are made of cells and have a universal genetic code; they obtain and use materials and energy to grow and develop; they reproduce; they respond to signals in their environment (**stimuli**) and maintain a stable internal environment; they change over time.

**Big Ideas in Biology** The study of biology revolves around several interlocking big ideas:

- ▶ **Cellular basis of life.** Living things are made of cells.
- ▶ **Information and heredity.** Living things are based on a universal genetic code written in a molecule called **DNA**.
- ▶ **Matter and energy.** Life requires matter that provides raw material, nutrients, and energy. The combination of chemical reactions through which an organism builds up or breaks down materials is called **metabolism**.
- ▶ **Growth, development, and reproduction.** All living things reproduce. In **sexual reproduction**, cells from two parents unite to form the first cell of a new organism. In **asexual reproduction**, a single organism produces offspring identical to itself. Organisms grow and develop as they mature.
- ▶ **Homeostasis.** Living things maintain a relatively stable internal environment.
- ▶ **Evolution.** Taken as a group, living things evolve, linked to a common origin.
- ▶ **Structure and function.** Each major group of organisms has evolved structures that make particular functions possible.
- ▶ **Unity and diversity of life.** All living things are fundamentally similar at the molecular level.
- ▶ **Interdependence in nature.** All forms of life on Earth are connected into a **biosphere**—a living planet.
- ▶ **Science as a way of knowing.** Science is not a list of facts but “a way of knowing.”

**Fields of Biology** Biology includes many overlapping fields that use different tools to study life. These include biotechnology, global ecology, and molecular biology.

**Performing Biological Investigations** Most scientists use the metric system as a way to share quantitative data. They are trained in safe laboratory procedures. To remain safe when you are doing investigations, the most important rule is to follow your teacher’s instructions.
