Aging and Durability of FRP Composites and Nanocomposites Arya Uthaman, Sabu Thomas, Hiran Mayookh Lal, 2024-02-21 The usage of composites is a broad and growing area of scientific research especially in developed and developing countries These materials are used in a broad range of applications in both structural and civil engineering sectors In many of these applications FRPs are exposed to one or more environmental influences so they need to be designed to meet durability requirements to withstand even the harshest of environments Aging and Durability of FRP Composites and Nanocomposites focuses on the latest developments in durability and long term ageing studies of composite materials especially for those used in civil and structural engineering applications The book will be a valuable reference resource for materials scientists and engineers who want to learn more about the long term service life and durability behaviour of composites under different environmental conditions Discusses composites and polymer nanocomposites Reviews different types of aging processes and degradation mechanisms in composites Covers different types of accelerated aging tests Presents theory modeling and simulation studies of aged composites and nanocomposites Looks at recent trends and future possibilities

Wear of Materials Peter J. Blau, 2003-10 The 14th International Conference on Wear of Materials took place in Washington DC USA 30 March 3 April 2003 These proceedings contain over two hundred peer reviewed papers containing the best research technical developments and engineering case studies from around the world Biomaterials and nano tribology receive special attention in this collection reflecting the general trends in the field Further highlights include a focus on the new generation of instrumentation to probe wear at increasingly small scales Approximately ninety communications and case studies a popular format for the academic community have also been included enabling the inclusion of the most up to date research Over 200 peer reviewed papers including hot topics such as biomaterials and nano tribology Keeping you up to date with the latest research from leading experts Includes communications and case studies

Bio-inspired Tactile Sensing Moritz Scharf, 2021-01-01 The transfers of natural mechanisms and structures into artificial technical applications are successful approaches for innovation and become more important nowadays The concept of Biomechatronics provides a structured framework to do so Following these ideas this work analyses a novel tactile sensor inspired by natural vibrissae The sense of touch is an indispensable part of the sensory system of living beings In e g rats the so called vibrissal system including long sensory hairs around the muzzle of the animals vibrissae is an essential part of tactile perception Rats can determine the location shape and texture of an object by touching it with their vibrissae Transferring these abilities to an artificial sensor design the interaction between the hair sensor shaft and different objects are analyzed The sensor hair shaft fulfills different functions in terms of a preprocessing of the captured signals Therefore by knowing and controlling these effects the captured signals can be optimized in a way that particular information inside the captured signals is pronounced
