can make a difference to future life choices particularly amongst certain groups of students Raising Achievement in Secondary Mathematics shows how well meant teaching strategies and approaches can in practice exacerbate underachievement in maths by making inappropriate demands on learners As well as criticizing some of the teaching and grouping practices that are considered normal in many schools the book also offers an alternative view of attainment and capability based on real classroom incidents in which low attaining students show themselves to be able to think about mathematics in quite sophisticated ways The author argues that teaching could be based on learners proficiency rather than on correcting deficits in knowledge and behaviour She describes how a group of teachers who believed that their students could do better with higher expectations developed a range of principles and strategies to support their work the students showed significant progress and the teachers felt they were doing a better job With numerous case studies ideas and teaching strategies this book is for anyone who is teaching or learning to teach mathematics *Policy, Belief and Practice in the Secondary English Classroom* Bethan Marshall, Simon Gibbons, Louise Hayward, Ernest Spencer, 2018-11-01 Studies of comparative classroom practice in the teaching of secondary English are limited especially when it comes to exploration of the day to day practice of English teachers in the secondary classroom This book presents a case study analysis of secondary classroom practice in three countries Canada England and Scotland Each country has had different degrees of state involvement within the secondary English curriculum over the last twenty years England has had the highest degree of state involvement in that it has had several statutory national curricula and a variety of assessment regimes Scotland has had a non statutory curriculum and no national tests and Canada has had no national curriculum at all with education being determined at province level and each province varying its policies The research adopts a case study approach involving both classroom observation and interviews with teachers Through this the authors explore the impact of state involvement on the reality of what happens in secondary English classrooms The book invites readers to consider the applicability of the findings to their own contexts to examine their own practice in the light of this and to consider the nature of the relationships between policy personal belief and practice in the teaching of English **The British National Bibliography** Arthur James Wells, 2001
