## Hydraulic System Return Filter Change

1. Properly park the crane on a firm level surface.
2. Position the upper over the front or rear of the crawler, engage the travel swing lock, and shut down the engine.
3. Release any trapped hydraulic pressure from the system by working the crane controls back and forth several times until the hydraulic pressure gauge in the operator's cab reads zero.

**WARNING**

The filter housing cover is used to retain a spring under tension. Carefully remove the capstones and washers which secure the cover to relieve tension on the spring.

**WARNING**

All trapped hydraulic pressure must be exhausted from the system before removing any plug or cover. A sudden release of hot oil could cause burns or other serious injury.

4. Position an appropriate container under the filter assembly. Clean the filter housing and head assembly to prevent contamination from entering the system. (Refer to Figure 5-16 for location of the return filter.)
5. Slowly open the air vent. Refer to Figure 5-17.
