

How the automatic seatbelt system works

The upper end of the belt is fastened firmly to the upper rear edge of the door (C), which mates with the load bearing structure of the vehicle body. The other end of the belt is wound on the automatic retractor under the seat (A).

As the door opens, it pulls the belt from the retractor and provides access to the interior of the car. **When the door is closed, the belt automatically places itself diagonally across your chest.**

The belt automatically takes up any belt slack and adjusts to your normal wearing position and movements so that you can conveniently reach all operating controls.

Safety belt warning light and buzzer

When belts are not connected

Engine cannot be started.

Buzzer will sound for about 6 seconds.

Warning light will glow until belts are reconnected.

Only after belts are reconnected, can engine be started.

If belts are disconnected while driving ...

Engine will not stop.

Warning light will glow until belts are reconnected.

Restarting a stalled engine is only possible after belts are reconnected.

Inertia reel retractor (A)

In a sudden stop or impact, the belt's inertia reel retractor automatically locks the belt. Sudden acceleration or hard braking, fast cornering or driving up or down steep hills also locks the belt.

To release a locked belt, lean back to take the body pressure off the belt.

Knee bar (B)

The foam-padded knee bar, which is located under the dashboard, prevents driver and passenger from sliding forward under the dashboard in a sudden stop, and absorbs impact forces. **The knee bar must not be removed.**

Press on buckle for quick release from belt.

Emergency release (C)

If circumstances require, press the emergency button marked EMERG. RELEASE at the upper end of the belt and pull out the belt tongue to provide quick release. Always reconnect the belt end.

Since this automatic restraint system is connected to the ignition, the engine can only be started if the belts are properly connected.
