chemistry This is the case in the currently significant areas of research including organometallic homogenous catalysis biological reactions of metalloproteins and even the solid state extended structures of new materials In these systems the metals are of primary importance because they are the sites of ligand substitution or redox reactions In the solid materials the coordination number of the metal and its stereochemistry are of major importance Some fifty years of research on transition metal complexes carried out in the laboratory of Professor Basolo at Northwestern University is recorded here as selected scientific publications The book is divided into three different major research areas each dealing with some aspect of coordination chemistry In each case introductory remarks are presented which indicate what prompted the research projects and what the major accomplishments were Although the research was of the academic curiosity driven type some aspects have proven to be useful to others involved in projects that were much more applied in nature The Educational Times, and Journal of the College of Preceptors ,1916 **The Publishers' Trade List Annual** ,1904 *The World Review* ,1927 **The United States Catalog** ,1928 **The United States Catalog** George Flavel Danforth, Marion Effie Potter,1900 The Academy ,1899 Popular Educator ,1895 **Rochdale free public library.
