Diseases and in Cell-based Therapies in the Management of Inflammatory Rheumatic Diseases, volume II Eric

Toussiro, Katarzyna Bogunia-Kubik,Philippe Saas,2025-01-22 Inflammatory rheumatic diseases IRD constitute a wide

spectrum of disorders encompassing inflammatory arthropathies including rheumatoid arthritis RA psoriatic arthritis PsA

and ankylosing spondylitis AS It also includes connective tissue disorders such as systemic lupus erythematosus SLE Sj gren

s syndrome SS or systemic sclerosis SSc This highly heterogeneous group of conditions has multifactorial and not fully

understood etiology and is characterized by the presence of persistent inflammation affecting primarily the musculoskeletal

system and connective tissue Disease progression ultimately leads to functional disability premature mortality as well as

economic and social burdens Rheumatoid arthritis and spondyloarthritis represent the most common inflammatory rheumatic

diseases The management of RA and other forms of IRD has dramatically changed in the last 20 years with the development

of targeted therapeutic agents namely biological disease modifying anti rheumatic drugs bDMARDs and targeted synthetic disease modifying anti rheumatic drugs tsDMARDs However a substantial proportion of patients still exhibits an inadequate response do not achieve remission or develop side effects *Clinical Laboratory Reference*, 2001 Laboratory products and services currently available in the United States Product information section arranged alphabetically by companies Entries include description and ordering information Indexes by manufactures brand names and test equipment and services Product photograph section

Thyroid Function Testing Gregory A. Brent, 2010-04-06 Thyroid function tests are utilized by essentially all medical practitioners across every clinical setting in patients from newborns to the elderly They are the most frequently measured endocrine tests The sensitive thyrotropin TSH assay reflects thyroid hormone feedback to the pituitary and is diagnostic of both thyroid hormone excess as well as deficiency The log linear relationship between serum TSH and thyroxine concentrations means that small changes in serum thyroxine are amplified by changes in serum TSH The availability of the sensitive TSH assay in essentially all clinical laboratories has improved and simplified the assessment of thyroid function for the diagnosis of thyroid disease and to monitor treatment Serum free thyroxine and thyrotropin concentrations as well as other thyroid tests can be measured utilizing an automated immunoassay platform that provides rapid and accurate results This simplified approach to thyroid assessment often requiring only a serum TSH measurement and rapid availability of the thyroid function tests results has expanded the scope of thyroid testing and clinicians ordering and interpreting thyroid tests There remain however many challenges in selecting the appropriate thyroid function test to order the correct interpretation of results and applying these results to the diagnosis and management of thyroid diseases It is especially important to be aware of limitations of thyroid function tests as well as special clinical circumstances that can influence thyroid function measurements The serum TSH concentration for example may not accurately reflect thyroid status in many situations including after prolonged hyperthyroidism when serum TSH remains suppressed for months in the presence of hypothalamic or pituitary disease or due to a number of interfering medications The serum free thyroxine measured by the analog method is not accurate with high or low serum binding proteins and during pregnancy Hospitalized patients often have thyroid function test abnormalities that are transient and return to normal after recovery from the acute illness Iodine excess and deficiency can dramatically influence thyroid function tests Significant insights have been gained into the regulation of thyroid hormone synthesis and especially the role of thyroid hormone metabolism in supplying tissues locally with an adequate supply of thyroid hormone In a number of instances these factors influence the selection and interpretation of thyroid function tests Polymorphisms common sequence variations in genes of components that regulate thyroid function and thyroid hormone action may also contribute to variability in thyroid function tests in a population

Preface This volume draws on an outstanding international panel of experts in thyroid function tests and thyroid function assessment They represent clinicians clinical researchers and basic science researchers all with a focus on some aspect of the assessment of

thyroid function The chapters all provide a clinical perspective but are informed by the most recent scientific advancements The first section of the book Chaps 1-3 presents the most recent advances in thyroid physiology a review of genetic influences on thyroid function tests and a discussion on the influence of iodine on thyroid function In Chap 1 Drs Huang and de Castro Neves describe thyroid hormone metabolism emphasizing the key role of thyroid hormone activation and inactivation in thyroid hormone action Dr Visser is a world leader in studies of thyroid metabolism and genetic influences on thyroid function In Chap 2 Dr Visser and his colleagues Drs van der Deure Medici and Peeters provide a clear view of this important and rapidly expanding field The population variation in the TSH set point relationship between serum TSH and thyroxine in an individual for example is thought to be genetically determined and influences the evaluation of thyroid function and thyroid function targets for treatment of thyroid disease Dr Zimmerman an internationally recognized expert in iodine and his colleague Dr Andersson provide in Chap 3 an in-depth treatment of the most significant influence on thyroid function throughout the world iodine intake The influence of iodine deficiency and excess on individual thyroid function is discussed as well as the population effects on thyroid diseases and especially fetal and neonatal development The basics of thyroid function measurements approaches limitations and clinical applications are described for the major categories of thyroid function tests Chaps 4-7 The authors of these chapters are innovators in the field strongly identified with the origination or significant refinement of the core tests utilized in thyroid assessment In Chap 4 Dr Hershman describes the measurement of TSH the clinical application and utilization This remains the cornerstone of thyroid testing but must be interpreted with an understanding of the dynamics of thyroid regulation An active controversy in thyroid measurement involves the appropriate use of serum thyroxine measurements and especially the value of the analog free thyroxine measurement the most commonly used thyroxine assay In Chap 5 Dr Stockigt provides a detailed assessment of thyroxine and triiodothyronine measurements and a clear message for their use and limitations The most common etiology of thyroid disease is autoimmune and the appropriate use of thyroid autoantibody measurements remains confusing to many clinicians In Chap 6 Dr Weetman and his colleague Dr Ajjan clearly describe the range of thyroid autoantibody tests and how they should be utilized clinically Thyroglobulin measurement is the key tumor marker to follow thyroid cancer patients and Dr Spencer and her colleague Ivana Petrovic describe the essential features of this measurement in Chap 7 It is essential that clinicians using thyroglobulin measurements to monitor thyroid cancer are aware of the performance of the assay being used and the factors that can interfere with the measurement Application of thyroid function testing to the key clinical settings is discussed by expert clinicians and clinical researchers in Chaps 8-13 The appropriate selection of thyroid function tests in the diagnosis and monitoring of thyroid disease in the ambulatory setting is discussed by Drs Farwell and Leung in Chap 8 This is the most common setting for thyroid function test measurement and a rational approach is described Specific issues of thyroid function in infants and children are discussed in Chap 9 by Drs LaFranchi and Balogh Screening for thyroid

disease among newborns has been a highly effective approach to prevent mental retardation. The assessment of thyroid function in newborns, especially premature infants, is challenging, as are the interpretation of thyroid function tests in infancy through childhood. Illness has a significant impact on thyroid function tests, and assessment in this group is described by Drs LoPresti and Patil in Chap 10. A logical approach to these patients is provided, as are ways to identify those patients with thyroid disease that need to be treated. Assessment of thyroid function in pregnancy is challenging and is being increasingly recognized as a crucial time to normalize maternal thyroid status. Adverse outcome for mother and her child can result from thyroid hormone deficiency or excess. In Chap 11, Drs Lazarus Soldin and Evans fully describe the use and limitations of thyroid tests in pregnancy and provide an approach to testing and monitoring thyroid function. The incidence of autoimmune thyroid disease increases significantly with age, and in Chap 12, Dr Samuels provides a clear approach to the assessment of thyroid status in the elderly and interpretation of thyroid studies. The influence of drugs on thyroid function testing remains a major clinical issue, with recognition of an ever-increasing list of medications that influence thyroid function and thyroid testing. In Chap 13, Drs Pearce and Ananthakrishnan comprehensively describe these medications with a special emphasis on their mechanism of action and on iodine-containing medications. I am most grateful to my colleagues for their enthusiasm and willingness to provide such outstanding contributions to this book. The editorial team at Springer is excellent and has been highly supportive and effective. My special thanks to Etor Laura Walsh, Associate Editor; Dianne Wuori, Editorial Assistant; Stacy Lazar, Senior Production Editor; Jenny Wolkowicki, and Crest Premedia Solutions for final production.
