

CONFIDENTIAL

ANNEX- A

NOTES

1. (U) Scrap materials that disclose the configuration and composition of Special Armor will be disposed of in accordance with established procedures at the Lima Army Tank Plant (LATP), Lima, Ohio.
2. (U) If Special Armor, including skirts and gunshields, is breached and the interior is exposed, a properly cleared (SECRET) responsible individual will immediately cover the exposed area from view and initiate action to repair the breach by welding or will evacuate the exposed armor to a maintenance facility where repairs can be made. (Refer to Security Classification Guide for the Abrams Tank System for repair/replacement procedures).
3. (U) Information will be declassified on Originating Agency's Determination Required (OADR).
4. (U) The classification will be the higher classification of the threat projectile or the range target.
5. (C) "Individual designs, drawings, or blueprints, or compilation of same, used for a specific process or purpose, after a competent technical authority determines that they do not reveal design information covered by the Special Armor Program (former GREEN GRAPE Special Access Program), may be classified at the CONFIDENTIAL level. Any assembly or blueprint, etc. that contains sufficient definition of Special Armor (formerly GREEN GRAPE) or its countermeasures will be classified as a minimum at the SECRET level in accordance with this guide. "

, Materiel Fielding Plan (MFP) for the M1A1 Tank United States. Marine Corps,1991 **Guidelines for Safe Response to Handling, Storage, and Transportation Accidents Involving Army Tank Munitions Or Armor which Contain Depleted Uranium** ,1990 **Federal Register** ,2006-08 **Personnel and Training Subsystem Integration in an Armor System** John J. Kane,1981 **Digital Procedural Skill Retention for Selected M1A2 Tank Inter-Vehicular Information System (IVIS) Tasks** William Richard Sanders,1999 The U S Army Force 21 program makes extensive use of digital communications technologies to speed the exchange of information among all operational levels While digital communications offers great potential anecdotal reports from field trials and testing repeatedly state that the basic procedural skills needed to operate these systems are highly perishable The present research developed estimates of digital procedural skill retention for the tasks of creating and sending digital map overlays and reports using the M1A2 Abrams tank Inter Vehicular Information System Twenty eight soldiers received instruction based on the M1A2 New Equipment Training Team lesson plan followed by an immediate evaluation of task performance and a follow on evaluation 30 days later Results showed a 52 percent reduction in the number of soldiers able to create and send digital map overlays after the 30 day delay and a 23 percent reduction in the number able to create and send digital reports Methods for measuring skill decay are presented and an approach to identify performance errors is provided DTIC Monthly Catalog of United States Government Publications ,1993 **Military Occupational Classification and Structure** ,1994 **Annual historical review** United States. Army Materiel Command. Historical Office,1992 Technical Report ,1990 *Training Strategies for the M1 Abrams Tank Driver Trainer* C. Mazie Knerr,1984 The DISAM Journal of International Security Assistance Management ,2000 Monthly Catalogue, United States Public Documents ,1994-06 **Research Report** ,1981 Specifications for an Operational Two-tiered Classification System for the Army Joseph Zeidner,2000 The broad objective of the present study is to design an improved two tiered classification system and to compare its classification efficiency to the current operational aptitude area AA system The total data set includes about 260 000 recruits serving in 170 different entry level MOS during 1987 1989 The set includes all available ASVAB Skill Qualification Test SQT data for MOS with adequate sample sizes collected by ARI during this time frame The proposed system to be evaluated in this study would use an invisible or black box first tier in which separate assignment variables AVs are computed for up to 150 job families The first tier AVs are to be used in assigning recruits to entry level MOS The second tier is used in recruiting counseling and administration The proposed system to be evaluated in the visible second tier uses up to 17 families It is proposed that the aptitude area scores of the visible system be recorded on each soldier s personnel record The principal finding of the present study is that the unbiased overall mean predicted performance MPP of the 150 job family structure is 195 compared to the MPP for the existing operational system of 023 a gain of more than eight fold The unbiased overall MPP

for the 17 job families is 146 The 17 family system is obtained by shredding the existing AA families within the boundaries of the operational classification families to maximize the Horst index Findings continue to support an early differential assignment theory DAT principle that maximum MPP is obtainable by using AVs for all jobs having adequate or stable validity data The results clearly demonstrate that considerable classification efficiency is potentially obtainable from the existing ASVAB if it is used in accordance with DAT principles DTIC *Update 12-6, Military Occupational Classification and Structure, Issue No. 6, June 26, 1995*, 1995 Crew Performance Associated with the Simulation of the Commander's Independent Thermal Viewer (CITV) Kathleen A. Quinkert, 1990 **Ground Freezing Effects on Soil Erosion of Army Training Lands**, 1998 Two areas were monitored at the Yakima Training Center YTC in central Washington to measure changes in M1A2 Abrams M1 tank rut surface geometry and in and out of rut saturated hydraulic conductivity Ksubfs soil penetration resistance SPR and bulk density over the 1995 1996 winter Profile meter data show that rut cross sectional profiles smoothed significantly and that turning ruts did so more than straight ruts Rut edges were zones of erosion and sidewall bases were zones of deposition Ksubfs values were similar in and out of ruts formed on soil with 0 5 percent water by volume but were lower in ruts formed on soil with about 15 percent water Mean SPR was similar in and out of ruts from 0 to 5 cm depth increased to 2 MPa outside ruts and 4 MPa inside ruts at 10 to 15 cm depth and decreased by 10 38 percent outside ruts and by 39 48% inside ruts at the 30 cm depth Soil bulk density was similar in and out of ruts from 0 to 2 5 cm depth and below 2 5 cm it was generally higher in ruts formed on moist soil with highest values between 10 and 20 cm depth Conversely density in ruts formed on dry soil was similar to out of rut density at all depths This information is important for determining impacts of tank ruts on water infiltration and soil erosion and for modifying the Revised Universal Soil Loss Equation RUSLE and the Water Erosion Prediction Project WEPP models to more accurately predict soil losses on Army training lands **A Strategy for Efficient Device-based Tank Gunnery Training in the Army National Guard** Joseph D. Hagman, 1996 A strategy is proposed for minimizing the device based training time required to prepare armor crews of the U S Army National Guard for on tank training and live fire gunnery qualification Using two devices i e the Conduct of Fire Tramer COFT and Abrams Full Crew Interactive Simulation Trainer AFIST efficiency is achieved by training only gunnery engagements subjected to later live fire evaluation focusing on those engagements not performed to standard and allocating training time to crews that need it most as determined through pretesting Guidance is provided to support strategy implementation at the company level and the conduct of research needed for future strategy refinement DTIC Armor, 1966
