Analysis and Design of Power Converter Topologies for Application in Future More Electric Aircraft Amit Kumar Singh, 2018-04-20 This thesis proposes new power converter topologies suitable for aircraft systems. It also proposes both AC DC and DC DC types of converters for different electrical loads to improve the performance of these systems. To increase fuel efficiency and reduce environmental impacts, less efficient non-electrical aircraft systems are being replaced by electrical systems. However, more electrical systems require more electrical power to be generated in the aircraft. The increased consumption of electrical power in both civil and military aircrafts has necessitated the use of more efficient electrical power conversion technologies. This book presents a comprehensive mathematical analysis and the design and digital simulation of the power converters. Subsequently, it discusses the construction of the hardware prototypes of each converter and the experimental tests carried out to verify the benefits of the proposed solutions in comparison to the existing solutions.
