**General and Specific Mental Abilities** Dennis J. McFarland, 2020-05-07. The history of testing mental abilities has seen the dominance of two contrasting approaches: psychometrics and neuropsychology. These two traditions have different theories and methodologies but overlap considerably in the tests they use. Historically, psychometrics has emphasized the primacy of a general factor, while neuropsychology has emphasized specific abilities that are dissociable. This issue about the nature of human mental abilities is important for many practical concerns. Questions such as gender, ethnic, and age related differences in mental abilities are relatively easy to address if they are due to a single dominant trait. Presumably, such a trait can be measured with any collection of complex cognitive tests. If there are many specific mental abilities, these would be much harder to measure and associated social issues would be more difficult to resolve. The relative importance of general and specific abilities also has implications for educational practices. This book includes the diverse opinions of experts from several fields, including psychometrics, neuropsychology, speech, language, and hearing, and applied psychology.

**(Generalized) Fuzzy Matrices And Relations** Herbert Toth, 2025-02-25. The book provides an overview of the main concepts and results related to fuzzy matrices and fuzzy relations, using fuzzy in a general sense to mean many-valued. This overview, along with numerous references to original contributions dispersed across various journals, serves as a comprehensive guide for further exploration. This volume can be viewed in two ways: i) as a companion to the author's previous work, *Relations: Concrete, Abstract and Applied*, published by WSPC in 2020, but with a distinct emphasis on many-valued concepts; or ii) as a standalone volume that can be read independently, which necessarily includes some repetition of material from the earlier book as preliminary or reference content. Similar to the previous book, this one does not present new findings but offers a self-contained compilation of known results selected from the extensive research conducted over the past five decades, arranged in a systematic manner. The topics covered in this text have been the subject of intensive research over the last two decades, yet there has been no book publication on this subject for over 15 years. This book aims to bridge that gap.

**The Justice of War** Richard Hall, 2019-11-06. *The Justice of War: Its Foundations in Ethics and Natural Law* puts normative ethical theory at the forefront in its discussion of the justice of war. Situating the modern theory of just war in its historical context, Richard A. S. Hall gives full attention to natural law, a mainstay of just war theory. Hall considers the American philosopher Josiah Royce's implicit theory of just war with its suggestion of a fourth component of just war theory, in addition to *jus ad bellum*, *jus in bello*, and *jus post bellum*, namely *jus ad pacem*, justice law for or about peace concerning the prevention of war and the maintenance of peace. This book addresses and answers affirmatively the following questions:

raised by just war theory Can just war theory be rationally defended against its realpolitik critics Can there be such a thing as a just or moral war The book aims at showing the doubters and critics that just war theory is a viable alternative to both the political realism of realpolitik and pacifism In brief war can be morally justified though under very restrictive conditions

Lao, Jason Young, 2019-09-30 This book examines the human proclivity to resist changing our beliefs Drawing on psychological neurological and philosophical research and integrating topics as wide ranging as emotion cognition social and physical context and learning theory Lao and Young explore why this resistance to change impedes our learning and progression They also suggest that failure to adapt our beliefs to available and informed evidence can incur costs that may be seen in personal growth politics science law medicine education and business Resistance to Belief Change explores the various manifestations of resistance including overt discursive and especially inertial forms of resistance As well as the influential factors that can impact upon them the book also examines how the self directed learner as well as teachers may structure the learning experience to overcome resistance and facilitate progressive and adaptive learning Lao and Young find that the impediments to learning and resistance to change are far more prevalent and costly than previously suggested in research and so this book will be of interest to a range of people in cognitive development social psychology and clinical and educational psychology
