care of injured wildlife was regarded as a low priority and euthanasia was the recommended option A lot has changed over the past twenty years and now caring for wildlife casualties is part of everyday life in many veterinary practices Following on from the major success of the first edition this second edition provides even more useful information on wildlife care and rehabilitation As well as covering a whole range of species with sections on birds mammals reptiles and amphibians this edition now includes information on many alien species appearing in the British countryside such as wallabies wild boar and exotic reptiles In this edition Essential guidance on handling first aid feeding and releasing and many other disciplines not featured in veterinary or nursing training Full of helpful tips from an expert in wildlife rehabilitation who has unparalleled practical experience Expanded chapters on the care of all species particularly casualty badgers otters and hedgehogs and more comprehensive guidance on rearing orphaned mammals and birds Lots more colour pictures to aid in management and care techniques and the latest information on zoonotic diseases from around the world 365 Question And Answers Om Books Editorial Team,2015-08-24 A truly special book of questions and answers for every day of the year Learn something new and exciting every single day on various topics like the Universe our Earth Plants and Animals Science and Technology Human Body and more 365 fascinating questions answered in these pages This beautifully illustrated book reveals the mysteries of a whole world of wonders A must have for curious young minds **Ethics for Robots** Derek Leben,2018-07-17 Ethics for Robots describes and defends a method for designing and evaluating ethics algorithms for autonomous machines such as self driving cars and search and rescue drones Derek Leben argues that such algorithms should be evaluated by how effectively they accomplish the problem of cooperation among self interested organisms and therefore rather than simulating the psychological systems that have evolved to solve this problem engineers should be tackling the problem itself taking relevant lessons from our moral psychology Leben draws on the moral theory of John Rawls arguing that normative moral theories are attempts to develop optimal solutions to the problem of cooperation He claims that Rawlsian Contractarianism leads to the Maximin principle the action that maximizes the minimum value and that the Maximin principle is the most effective solution to the problem of cooperation He contrasts the Maximin principle with other principles and shows how they can often produce non cooperative results Using real world examples such as an autonomous vehicle facing a situation where every action results in harm home care machines and autonomous weapons systems Leben contrasts Rawlsian algorithms with alternatives derived from utilitarianism and natural rights libertarianism Including chapter summaries and a glossary of technical terms Ethics for Robots is essential reading for philosophers engineers computer scientists and cognitive scientists working on the problem of ethics for autonomous systems **Learning About Birds, Grades 4 - 8** Debbie Routh,2002-01-01 Bring the outside inside the classroom using Learning about Birds for grades 4 and up This 48 page book covers classification appearance adaptations and endangered species It includes questions observation activities crossword puzzles research projects study sheets unit tests a bibliography and an answer key *Physics Education* Hans Ernst

Fischer, Raimund Girwidz, 2022-01-12 This book offers a comprehensive overview of the theoretical background and practice of physics teaching and learning and assists in the integration of highly interesting topics into physics lessons. Researchers in the field, including experienced educators, discuss basic theories, the methods, and some contents of physics teaching and learning, highlighting new and traditional perspectives on physics instruction. A major aim is to explain how physics can be taught and learned effectively and in a manner enjoyable for both the teacher and the student. Close attention is paid to aspects such as teacher competences and requirements, lesson structure, and the use of experiments in physics lessons. The roles of mathematical and physical modeling, multiple representations, instructional explanations, and digital media in physics teaching are all examined. Quantitative and qualitative research on science education in schools is discussed as a quality assessment of physics instruction. The book is of great value to researchers involved in the teaching and learning of physics, to those training physics teachers, and to pre-service and practising physics teachers.
