with practical implementation questions concerning the limits of current global health programming This book is an experiential analysis of HIV treatment programs that includes first hand accounts of how female patients explain and cope with the poor access to and the inconsistencies in the delivery of HIV service care that complicates their adherence to treatment as well as the complex power relations they navigate daily Eloho Ese Basikoro also addresses the failures of policymakers who talk about gender mainstreaming but fail to deliver sustainable health services for disenfranchised women suffering from the social stigma and alienation associated with seropositivity This inter regional study is of great interdisciplinary interest to a wide variety of scholars and policymakers whether they are researching gendered inequality from a geographical anthropological or global health perspective or are interested in broader concerns about development and inequality in sub Saharan Africa

*Wellbeing and Place* Sara Fuller, 2016-02-24 The last twenty years have witnessed an important movement in the aspirations of public policy beyond meeting merely material goals towards a range of outcomes captured through the use of the term wellbeing Nonetheless the concept of wellbeing is itself ill defined a term used in multiple different contexts with different meanings and policy implications Bringing together a range of perspectives this volume examines the intersections of wellbeing and place including immediate applied policy concerns as well as more critical academic engagements Conceptualisations of

place context and settings have come under critical examination and more nuanced and varied understandings are drawn out from both academic and policy related research Whilst quantitative and some policy approaches treat place as a static backdrop or context others explore the interrelationships of emotional social cultural and experiential meanings that are both shape place and are shaped in place Similarly wellbeing may be understood as a relatively stable and measurable entity or as a more situation dependent and relational effect The book is structured into two sections essays that explore the dynamics that determine wellbeing in relation to place and essays that explore contested understandings of wellbeing both empirically and theoretically

Popular Music Gavin J. Andrews, Paul Kingsbury, Robin Kearns, 2016-04-01 Unearthing the messy and sprawling interrelationships of place wellbeing and popular music this book explores musical soundscapes of health ranging from activism to international charity to therapeutic treatments and how wellbeing is sought and attained in contexts of music Drawing on critical social theories of the production circulation and consumption of popular music the book gathers together diverse insights from geographers and musicologists Popular music has become increasingly embedded in complex and often contradictory discourses of wellbeing For instance some new genres and sub cultures of popular music are associated with violence drug use and the angst of living yet simultaneously define the hopes and dreams of millions of young people At a service level popular music is increasingly used as a therapeutic modality in holistic medicine as well as in conventional health care and public health practice The genre of popular music then is fundamental to human wellbeing as an active and central part of people s emotional lives By conceptually and empirically foregrounding place this book demonstrates how music whether from particular places about particular places or played in particular places is a crucial component of health and wellbeing *Geographies of Health, Disease and Well-being* Mei-Po Kwan, 2016-03-23 This book is a collection of papers

This book was published as a special issue of Annals of the Association of American Geographers **Place, Health, and Diversity** Melissa D. Giesbrecht, Valorie A. Crooks, 2016-06-03 Although health equity and diversity focussed research has begun to gain momentum there is still a paucity of research from health geographers that explicitly explores how geographic factors such as place space scale community and location inform multiple axes of difference Such axes can include residential location age sex gender race ethnicity culture religion socio economic status marital status sexual orientation education level and immigration status Specifically focussing on Canada s rapidly changing society which is becoming increasingly pluralized and diverse this book examines the place health diversity intersection in this national context Health geographers are well positioned to offer a valuable contribution to diversity focussed research because place is inextricably linked to differential experiences of health For example access to health care and health promoting services and resources is largely influenced by where one is physically and socially situated within the web of diversity Furthermore applying geographic concepts like place in both the physical and social sense allows researchers to explore multiple axes of difference simultaneously Such geographic perspectives as presented in this book offer new insights into what makes diverse people in diverse places with access to diverse resources un healthy in different ways in Canada and beyond Non-Representational Theory & Health

Gavin J. Andrews, 2018-02-13 Non representational theory is an academic approach that animates the active world its taking place It shows how material sensory and affective processes combine with conscious thought and agency in the making of everyday life This book offers an agenda for health geography providing the first comprehensive overview of what a more than representational health geography looks like It outlines the basis of a new ontological understanding of health and explores the key qualities of movement space that are critical to how health emerges within the assemblages that enable it It shows how non representational events and concerns are key to human happiness and wellbeing to the experience of health and disease to activities that add to or detract from health and to health care work not to mention to the broader initiatives and operation of health institutions and health sciences This book bridges the gap between non representational theory and health research and provides the groundwork for future developments in the field It will be of interest to students researchers and professionals alike working in health geography and a range of other disciplines

presentation to engage diverse readership      Come From Away Robert Huish,2024-11-14 This volume takes a deep dive into the lasting legacy of stigma from the COVID 19 Pandemic Self isolation quarantine face masks hand washing and travel restrictions are all ancient methods of pandemic management that extend past antiquity Yet in a highly globalized pandemic such ancient methods were the front lines of defense for a modern day pandemic And with such ancient methods come ancient problems such as stigma Based on two years of extensive research in Nova Scotia Canada New Zealand and Australia jurisdictions that attempted to achieve Zero COVID the book carefully outlines how with each wave of the pandemic a new group was blamed for it When public measures were enforced often anger was turned to groups who were assumed to have brought the virus into the country or province The nature of anger and the nature of stigma evolved through the pandemic but the impacts remain In particular the pandemic allowed jurisdictions to designate rights and freedoms for people from certain places while heavily penalizing others from away The book argues that COVID 19 was born through globalization but the global response to it was fractured and divisive based on national and territorial identities as is reflected through targeted stigma If another pandemic is to emerge the book argues that a commitment to non stigmatizing methods is needed in order to ensure compassion dignity and respect which are the ultimate goals of global health      Race and Environmental Justice in the Era of Climate Change and COVID-19 Tatiana Konrad,2025-08-01 Informed by transdisciplinary research in social and environmental justice Race and Environmental Justice in the Era of Climate Change and COVID 19 is a contribution to the scholarly discourse as well as a form of activism for environmental climate and health justice Using race and Indigeneity as an analytical lens the book explores how justice in the era of climate change and COVID 19 is envisioned depicted and achieved With a focus largely on humans and environments its explorations of in justice illustrate the wide health and safety gaps between individuals communities and even nations living under different environmental conditions The volume also moves beyond the human toward justice for all beings This book foregrounds voices from world communities provides solutions to environmental and health crises and advances environmental justice
