Signal Processing for Intelligent Sensor Systems with MATLAB, Second Edition David C. Swanson, 2012 Building on the unique features that made the first edition a bestseller this second edition includes additional solved problems and web access to the large collection of MATLAB™ scripts that are highlighted throughout the text The book offers expanded coverage of audio engineering transducers and sensor networking technology It also includes new chapters on digital audio processing as well as acoustics and vibrations transducers The text addresses the use of meta data architectures using XML and agent based automated data mining and control The numerous algorithms presented can be applied locally or network based to solve complex detection problems

Theory and Design of Adaptive Filters John R. Treichler, C. Richard Johnson, Michael G. Larimore, 2001 Rather than superficially examining an extensive list of possible applications benefiting from adaptive filter use the authors examine four such problems in detail and review the common attributes that are shared with many other applications of adaptive filtering The authors develop the basic rules and algorithms for filter performance and provide tools for design along with an appreciation of the complexity of behavioral analysis Derivations and convergence discussions are kept to a basic level The presentation focuses on a few

principles and applies them to a series of motivating examples that include in depth discussion of implementation aspects for filter design not found in other books Serves as a valuable reference for practicing engineers *Theoretical Foundations of Digital Imaging Using MATLAB®* Leonid P. Yaroslavsky, 2012-11-26 With the ubiquitous use of digital imaging a new profession has emerged imaging engineering Designed for newcomers to imaging science and engineering *Theoretical Foundations of Digital Imaging Using MATLAB* treats the theory of digital imaging as a specific branch of science It covers the subject in its entirety from image formation to image perfecting Based on the author's 50 years of working and teaching in the field the text first addresses the problem of converting images into digital signals that can be stored transmitted and processed on digital computers It then explains how to adequately represent image transformations on computers After presenting several examples of computational imaging including numerical reconstruction of holograms and virtual image formation through computer generated display holograms the author introduces methods for image perfect resampling and building continuous image models He also examines the fundamental problem of the optimal estimation of image parameters such as how to localize targets in images The book concludes with a comprehensive discussion of linear and nonlinear filtering methods for image perfecting and enhancement Helping you master digital imaging this book presents a unified theoretical basis for understanding and designing methods of imaging and image processing To facilitate a deeper understanding of the major results it offers a number of exercises supported by MATLAB programs with the code available at www.crcpress.com **Digital Signal Processing with Examples in MATLAB** Samuel D.
