Industrial Crops Improvement Nitish Kumar,2025-01-24 This book explores the different conventional and biotechnological techniques for enhancing the productivity of industrial crops The growth of the industrial crop sector has become a widespread global phenomenon that helps rural livelihoods and propels economic development Contrary to staple crops industrial crops are cultivated with the intention of being sold for a high profit Industrial crops are a crucial component of plans to increase food security because they offer the required stability during periods of economic or climatic crises In order to maintain their livelihood and food security many farm households balance the advantages and disadvantages of producing food crops and industrial crops Avoiding land use rivalry with crops grown for food and feed production is crucial when considering growing industrial crops on agricultural soils The past several years have seen a rise in the awareness of scholars and decision makers regarding the immediate and long term effects of climatic variables on economic food security social and political results In order to sustain food production with more climate resilient crops for future generations genetic variety both natural and artificial is crucial Therefore addressing the problem of finding a compromise between increasing crop production under a specific set of conditions and reducing the chance of crop failure when conditions change is important and difficult An assortment of meteorological conditions is used to grow industrial crops Many are subsistence farmers who run extremely tiny farms with very little agricultural input to produce products that can be sold It is a significant problem to preserve the variety of these crops and handle all crop culture related difficulties By offering the knowledge required to minimize the dangers of industrial crop breeding through managing genetic diversity the author believe that this book will primarily address a need that has not yet been met in this and other grower groups Cumulated

Genomic Designing for Abiotic Stress Resistant Fruit Crops Chittaranjan Kole, 2022-09-20 This book presents deliberations on molecular and genomic mechanisms underlying the interactions of crop plants to the abiotic stresses caused by heat cold drought flooding submergence salinity acidity etc important to develop resistant crop varieties Knowledge on the advanced genetic and genomic crop improvement strategies including molecular breeding transgenics genomic assisted breeding and the recently emerging genome editing for developing resistant varieties in fruit crops is imperative for addressing FHNEE food health nutrition energy and environment security Whole genome sequencing in many of these crops followed by genotyping by sequencing has provided precise information regarding the genes conferring resistance useful for gene discovery allele mining and shuttle breeding which in turn opened up the scope for designing crop genomes with resistance to abiotic stresses The seven chapters each dedicated to a fruit crop and a fruit crop group in this volume elucidate different types of abiotic stresses and their effects on and interaction with the crops enumerate the available genetic diversity with regard to abiotic stress resistance among available cultivars illuminate the potential gene pools for utilization in interspecific gene transfer present brief on classical genetics of stress resistance and traditional breeding for transferring them to their cultivated counterparts depict the success stories of genetic engineering for developing abiotic stress resistant crop varieties discuss on molecular mapping of genes and QTLs underlying stress resistance and their marker assisted introgression into elite varieties enunciate different genomics aided techniques including genomic selection allele mining gene discovery and gene pyramiding for developing adaptive crop varieties with higher quantity and quality of

yields and also elaborate some case studies on genome editing focusing on specific genes for generating abiotic stress resistant crops **Index Medicus** ,2003 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings **The Lupin Genome** Karam B. Singh,Lars G. Kamphuis,Matthew N. Nelson,2020-01-30 This book on lupin genomics primarily focuses on the narrow leafed lupin NLL and details the genomic resources that have been developed and how they are currently being used to help advance both fundamental and applied research on NLL in areas ranging from its domestication to plant microbe interactions and syntenic relationships between NLL and other legume crops It also reports on genomic efforts being pursued with regard to other lupin crops Lupins are important ecological engineers they can colonise and thrive in low nutrient soils due to their ability to fix atmospheric nitrogen in symbiosis with bacteria and efficiently take up phosphorous Recently lupins have attracted considerable interest not only because of their value for sustainable farming as a break crop but also as a potential super food for fighting major health issues in connection with diabetes and obesity Narrow leafed lupin is the main grain legume crop grown primarily in Australia and was therefore selected for the development of a reference lupin genome and associated genomic resources Its genome has recently been sequenced with a focus on the gene rich space which has advanced the development of new breeding tools for the improvement of NLL and related lupin crops

in Plants Yuan-Ming Zhang,Zhenyu Jia,Shang-Qian Xie,Jia Wen,Shibo Wang,Ya-Wen Zhang,2024-01-26 Genome wide association studies GWAS have been widely used in the genetic dissection of complex traits However there are still limits in current GWAS statistics For example 1 almost all the existing methods do not estimate additive and dominance effects in quantitative trait nucleotide QTN detection 2 the methods for detecting QTN by environment interaction QEI are not straightforward and do not estimate additive and dominance effects as well as additive by environment and dominance by environment interaction effects leading to unreliable results and 3 no or too simple polygenic background controls have been employed in QTN by QTN interaction QQI detection As a result few studies of QEI and QQI for complex traits have been reported based on multiple environment experiments Recently new statistical tools including 3VmrMLM have been

developed to address these needs in GWAS In 3VmrMLM all the trait associated effects including QTN QEI and QQI related effects are compressed into a single effect related vector while all the polygenic backgrounds are compressed into a single polygenic effect matrix These compressed parameters can be accurately and efficiently estimated through a unified mixed model analysis To further validate these new GWAS methods particularly 3VmrMLM they should be rigorously tested in real data of various plants and a wide range of other species
