Genomic selection GS is a promising tool in the field of breeding especially in the era where genomic data is becoming cheaper The potential of this tool has not been realized due to its limited adaptation in various crops Marker Assisted Selection MAS has been the method of choice for plant breeders while using the genomic information in the breeding pipeline MAS however fails to capture vital minor gene effects while focusing only on the major genes which is not ideal for breeding advancement especially for quantitative traits such as yield The main aim of statistical methodologies coming under the umbrella of GS on using the whole genome information is to predict potential candidates for breeding advancement while optimizing the use of resources such as land manpower and most importantly time Lack of proper understanding of the methods and their applications is one of the reasons why breeders shy away from this tool The book is meant for biologists especially breeders and provides a comprehensive idea of the statistical methodologies used in GS guidance on the choice of models and design of datasets The book also encourages the readers to adopt GS by demonstrating the current scenarios of these models in some of the important crops among oilseeds vegetables legumes tuber crops and cereals For ease of implementation of GS the book also provides hands on scripts on GS data design and modeling in a popular open source statistical program Additionally prospective in GS model development and thereby enhancement in crop improvement programs is discussed **Functional genomics in fruit trees: From 'omics to sustainable biotechnologies, volume II** Concetta Licciardello, Giorgio Gambino, Manuel Talón, Riccardo Velasco, Irene Perrone, 2023-05-12 *Insights in Statistical Genetics and Methodology: 2022* Simon Charles Heath, Rongling Wu, 2023-10-24
