The Global Nonlinear Stability of the Minkowski Space Demetrios Christodoulou, Sergiu Klainerman, 2014-07-14 The aim of this work is to provide a proof of the nonlinear gravitational stability of the Minkowski space time More precisely the book offers a constructive proof of global smooth solutions to the Einstein Vacuum Equations which look in the large like the Minkowski space time In particular these solutions are free of black holes and singularities The work contains a detailed description of the sense in which these solutions are close to the Minkowski space time in all directions It thus provides the mathematical framework in which we can give a rigorous derivation of the laws of gravitation proposed by Bondi Moreover it establishes other important conclusions concerning the nonlinear character of gravitational radiation The authors obtain their solutions as dynamic developments of all initial data sets which are close in a precise manner to the flat initial data set corresponding to the Minkowski space time They thus establish the global dynamic stability of the latter Originally published in 1994 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905
